

Advice on Use of RCD with RPI H5A_222

V1.0-11/09/2020

If an RCD or RCBO is required to detect residual earth leakage currents in the inverter submains or upstream AC cabling, Delta Electronics Australia recommends using a Type AC RCD or RCBO with a maximum differential current setting of no less than 30 mA.

The following make and models have been tested with the H5A_222 and found to be compatible. Delta Electronics Australia cannot take responsibility for compatibility with any other makes/models of RCD/RCBO.

Make	Model
ABB	DSN 201 C25 AC30
